

Integrated Cloud & Mobile Healthcare Application Suite for VAFHS

Whitepaper

Prepared for: Vietnam Australia Family Healthcare Services (VAFHS)
Date: June 8, 2025

Powered by Odoo Community Edition

Confidential Document

1 Executive Summary

This whitepaper presents a comprehensive, secure, and scalable healthcare application suite tailored for Vietnam Australia Family Healthcare Services (VAFHS). Built on Odoo Community Edition, the solution integrates AI/ML services, Ministry of Health (MOH) prescription management APIs, and mobile applications. It streamlines clinical documentation, enhances patient care coordination, and ensures compliance with HIPAA and MOH standards, with multilingual support (English, Vietnamese, etc.) to serve Vietnam's diverse population. The implementation is designed to complete within 6 months, leveraging a team of 9 professionals.

2 Introduction

VAFHS aims to modernize healthcare delivery through a unified platform addressing clinical, operational, and patient-facing needs. This solution combines Odoo's customizable healthcare modules, AI/ML-driven transcription and analytics, and MOH-compliant prescription management. It supports Vietnam's healthcare ecosystem with features like telemedicine, remote monitoring, and multilingual communication via WhatsApp and Zalo.

3 Solution Overview

The Integrated Cloud & Mobile Healthcare Application Suite is a cloud-native platform that unifies healthcare management for VAFHS. It includes a web-based Odoo interface, mobile apps, AI/ML services, and MOH API integrations.

3.1 Technology Stack

- **Core Platform:** Odoo Community Edition, customized for healthcare.
- **AI/ML Services:** Whisper AI for transcription, spaCy and DistilBERT for medical text analysis, TensorFlow for predictive analytics, Odoo Chatbots for conversational AI.
- **Mobile Apps:** iOS and Android applications.
- **Integration:** REST APIs for Odoo and MOH.
- **Translation:** Multilingual support (English, Vietnamese, etc.).

3.2 Key Objectives

- Enhance clinical efficiency with AI-driven transcription and note generation.
- Improve patient care via telemedicine and remote monitoring.
- Ensure compliance with HIPAA and Vietnam's MOH standards.
- Provide actionable insights through advanced analytics.
- Support multilingual communication (English, Vietnamese, etc.).

4 Application Architecture

The application architecture is a microservices-based, cloud-native design, ensuring scalability, security, and modularity.

- **Client Layer:** Web browsers for Odoo; mobile apps for field agents/patients.
- **Application Layer:** Odoo with healthcare modules and integrated chatbots.

- **AI/ML Layer:** Handles transcription (Whisper AI), text analysis (spaCy, DistilBERT), and predictive analytics (TensorFlow).
- **Data Layer:** Odoo database for EHR, patient data, and logs.
- **External Systems:** MOH APIs for prescription management.

5 Solution Architecture

The solution architecture integrates Odoo modules and MOH APIs for a cohesive ecosystem.

- **Compute:** Odoo server for application logic.
- **AI/ML:** Whisper AI for transcription, spaCy and DistilBERT for medical text analysis, TensorFlow for predictive analytics.
- **Communication:** Odoo Chatbots (conversational AI), notifications via SMS, WhatsApp, Zalo, Odoo-based telehealth module.
- **External APIs:** MOH prescription APIs.

6 Key Features and AI/ML Integration

6.1 Medical Speech-to-Text & Clinical Documentation

- **Real-Time Transcription:** Whisper AI transcribes consultations in specialties like Primary Care and Cardiology.
- **Batch Transcription:** Processes stored audio.
- **Custom Vocabularies:** Enhances accuracy for VAFHS-specific terms.
- **Speaker Diarization:** Labels clinician/patient speech.
- **Clinical Notes:** spaCy and DistilBERT generate structured notes for Odoo EHR.

6.2 Medical Text Analysis and Insights

- spaCy and DistilBERT extract medications, conditions, and procedures.
- Integrates with Odoo EHR for structured storage.
- Enhances Odoo Reporting & Analytics with insights.

6.3 PHI Identification

- spaCy and DistilBERT identify Protected Health Information (PHI).
- Stores PHI in encrypted Odoo database tables.

6.4 Pharmacovigilance Support

- Whisper AI transcribes drug safety reports.
- spaCy and DistilBERT identify side effects for Odoo's Pharmacovigilance module.

6.5 Telehealth Integration

- Odoo-based telehealth module enables virtual consultations.
- Real-time transcription/subtitling using Whisper AI.
- Stores session data in Odoo.

6.6 Conversational AI & Patient Self-Service

- Odoo Chatbots handle appointment scheduling and FAQs in English, Vietnamese, etc.
- Notifications sent via SMS, WhatsApp, Zalo.
- Integrates with Odoo Patient Portal.

6.7 Remote Patient Monitoring

- Collects wearable data, stored in Odoo database.
- TensorFlow predicts health trends.
- Integrates with Odoo Home Health Services.

6.8 Advanced Analytics & Reporting

- Odoo dashboards display spaCy and DistilBERT insights.
- TensorFlow models predict patient outcomes and resource needs.

6.9 Prescription Management (MOH APIs)

- **Facility Login API:** Authenticates VAFHS systems.
- **Doctor Management API:** Syncs doctor records.
- **Doctor Login API:** Authenticates doctors.
- **Prescription Submission API:** Sends prescriptions to MOH.
- **Prescription Retrieval API:** Pharmacies access prescriptions.
- **Prescription Update API:** Updates dispensed quantities.
- **Prescription Status API:** Validates prescription status.

7 Odoo Module Implementation

Customized Odoo modules include:

- **Patient Relationship Management:** Tracks interactions, campaigns, and follow-ups.
- **Appointment Scheduling & Telemedicine:** Manages bookings and telehealth.
- **Billing:** Automates OPD/IPD billing, integrates with MOH APIs and Vietnam VAT.
- **EHR:** Stores transcribed notes, PHI, and MOH prescription data.
- **HR & Payroll:** Manages staff schedules and payroll.
- **Inventory:** Tracks supplies, linked to billing and MOH data.
- **Patient Communication:** Sends notifications via SMS, WhatsApp, Zalo.

- **Marketing Automation:** Runs health campaigns.
- **Survey & Feedback:** Collects patient feedback.
- **Patient Portal:** Offers self-service for appointments and records.
- **Field Appointment & Dispatch:** Optimizes field tasks.
- **Work Order Management:** Tracks service orders.
- **Mobile Access:** Empowers field agents.
- **Medical Equipment Maintenance:** Schedules equipment servicing.
- **Home Health Services:** Supports remote care.
- **SLA & Compliance:** Ensures HIPAA and MOH compliance.
- **Reporting & Analytics:** Provides KPI dashboards and predictive insights.

8 Mobile Application Features

Mobile iOS and Android apps support:

- **Field Agents:**
 - Access Odoo work orders, schedules, and patient data.
 - Real-time transcription for documentation using Whisper AI.
 - GPS navigation and task updates.
- **Patients:**
 - Patient Portal for appointments, records, and Odoo Chatbots.
 - Telehealth with transcription support.

9 Data Workflows

- **Clinical Documentation:** Audio from mobile/web → Whisper AI → spaCy/DistilBERT generates notes → spaCy/DistilBERT extracts entities → Odoo EHR stores data; PHI in encrypted Odoo database.
- **Prescription Management:** Odoo EHR submits prescriptions via MOH Submission API → Pharmacies retrieve/update via MOH APIs → Status synced with Odoo.
- **Remote Monitoring:** Wearable devices send data → Odoo database → TensorFlow analyzes → Insights in Odoo Analytics.

10 Sample Application Screenshots

- **Odoo EHR Interface:** Displays patient records, transcribed notes, and MOH prescriptions.
- **Mobile App (Field Agent):** Shows work orders, GPS, and transcription input.
- **Patient Portal:** Supports appointment booking and record access in English, Vietnamese, etc.
- **Analytics Dashboard:** Visualizes KPIs and predictive insights.

11 Non-Functional Requirements

11.1 Security & Compliance

- HIPAA-compliant with Odoo's security features, including data encryption and user authentication.
- Role-based access control via Odoo's user management system.
- Audit logging for compliance with HIPAA and MOH standards.
- Secure API integrations for MOH prescription management.

11.2 Scalability & Reliability

- Odoo's modular architecture supports auto-scaling for increased user load.
- Multi-region database replication for high availability.
- Load balancing for consistent performance.

11.3 Performance

- Real-time transcription latency < 1 s.
- Optimized API response times for efficiency.

11.4 User Experience

- Intuitive Odoo and mobile interfaces.
- Adheres to Material Design and Human Interface Guidelines.

11.5 Language Support

- Whisper AI for English transcription; multilingual support for English, Vietnamese, etc.
- Notifications via WhatsApp/Zalo in Vietnamese and other languages.

12 Benefits for VAFHS

- **Clinical Efficiency:** 25% reduction in missed appointments via reminders.
- **Patient Satisfaction:** 30% improvement through multilingual communication.
- **Financial Transparency:** 15% increase in billing accuracy with Vietnam VAT integration.
- **Field Efficiency:** Real-time mobile access for agents.
- **Compliance:** Meets HIPAA and MOH standards.

13 Implementation Roadmap

To achieve implementation within 6 months, the roadmap is optimized with parallelized tasks and a focused team effort.

1. Phase 1: Infrastructure Setup (Weeks 1-4)

- Configure Odoo server, database, and security settings.

- Establish compliance protocols for HIPAA and MOH.
- 2. Phase 2: Odoo Customization (Weeks 3-10)**
 - Deploy Odoo, customize 17 modules.
 - Integrate MOH APIs (Facility Login, Doctor Management, Prescription APIs).
- 3. Phase 3: AI/ML Integration (Weeks 7-12)**
 - Integrate Whisper AI, spaCy, DistilBERT, TensorFlow, Odoo Chatbots.
- 4. Phase 4: Mobile App Development (Weeks 7-12)**
 - Develop/test iOS and Android apps in parallel with AI/ML integration.
- 5. Phase 5: Testing & Compliance (Weeks 13-15)**
 - Conduct HIPAA/MOH audits, load testing, and bug fixing.
- 6. Phase 6: Deployment & Monitoring (Weeks 16-18)**
 - Deploy with monitoring tools.
 - Perform initial iterations based on feedback.

14 Development Team and Effort

The project requires a team of 9 professionals to complete within 6 months, with a total effort of 6,400 person-hours.

14.1 Team Composition

- **1 Project Manager:** Oversees timeline, coordination, and stakeholder communication (PMP/Agile certified).
- **2 Odoo Infrastructure Engineers:** Expertise in Odoo server setup, database management, and HIPAA compliance.
- **2 Odoo Developers:** Proficient in Odoo, Python, PostgreSQL, and MOH API integration (Odoo certification).
- **2 Mobile App Developers:** Experienced in iOS/Android development with health-care app expertise.
- **1 AI/ML Engineer:** Skilled in Whisper AI, spaCy, DistilBERT, TensorFlow (certified in machine learning).
- **1 QA Engineer:** Expertise in HIPAA/MOH compliance testing, load testing (Selenium, JMeter).

14.2 Effort Breakdown

- **Total Effort:** 6,400 person-hours.
- **Project Manager:** 600 hours (planning, coordination).
- **Odoo Infrastructure Engineers:** 1,400 hours (infrastructure, security).
- **Odoo Developers:** 2,000 hours (module customization, MOH APIs).
- **Mobile App Developers:** 1,600 hours (iOS/Android development).

- **AI/ML Engineer:** 1,200 hours (AI/ML integration).
- **QA Engineer:** 600 hours (testing, compliance).

15 Conclusion

The Integrated Cloud & Mobile Healthcare Application Suite equips VAFHS with a modern, AI-driven platform to enhance healthcare delivery in Vietnam. By integrating Odoo, MOH APIs, and multilingual support, it ensures efficiency, compliance, and superior patient care within a 6-month implementation timeline.
